Ammunition Overview

CW2 John M. Lloyd
Supply Management Officer
AGCW

Objectives

- Introduction to the Centralized Ammunition Management (CAM)
- Affects on Training
- Operational Ammunition requests
- CADS/PADS
- Ammunition Issues
- Ammunition Turn-ins
- CAT I

Centralized Ammunition Management

- Joint Munitions Command (JMC)
- Manages wholesale and retail ammunition stocks as a unified whole.
- Allow JMC to manage ammunition at ASP’s until issued to units for training or operational load.
- Reduces transportation costs.
- Provides better distribution management.
- Provides JMC with total asset visibility.

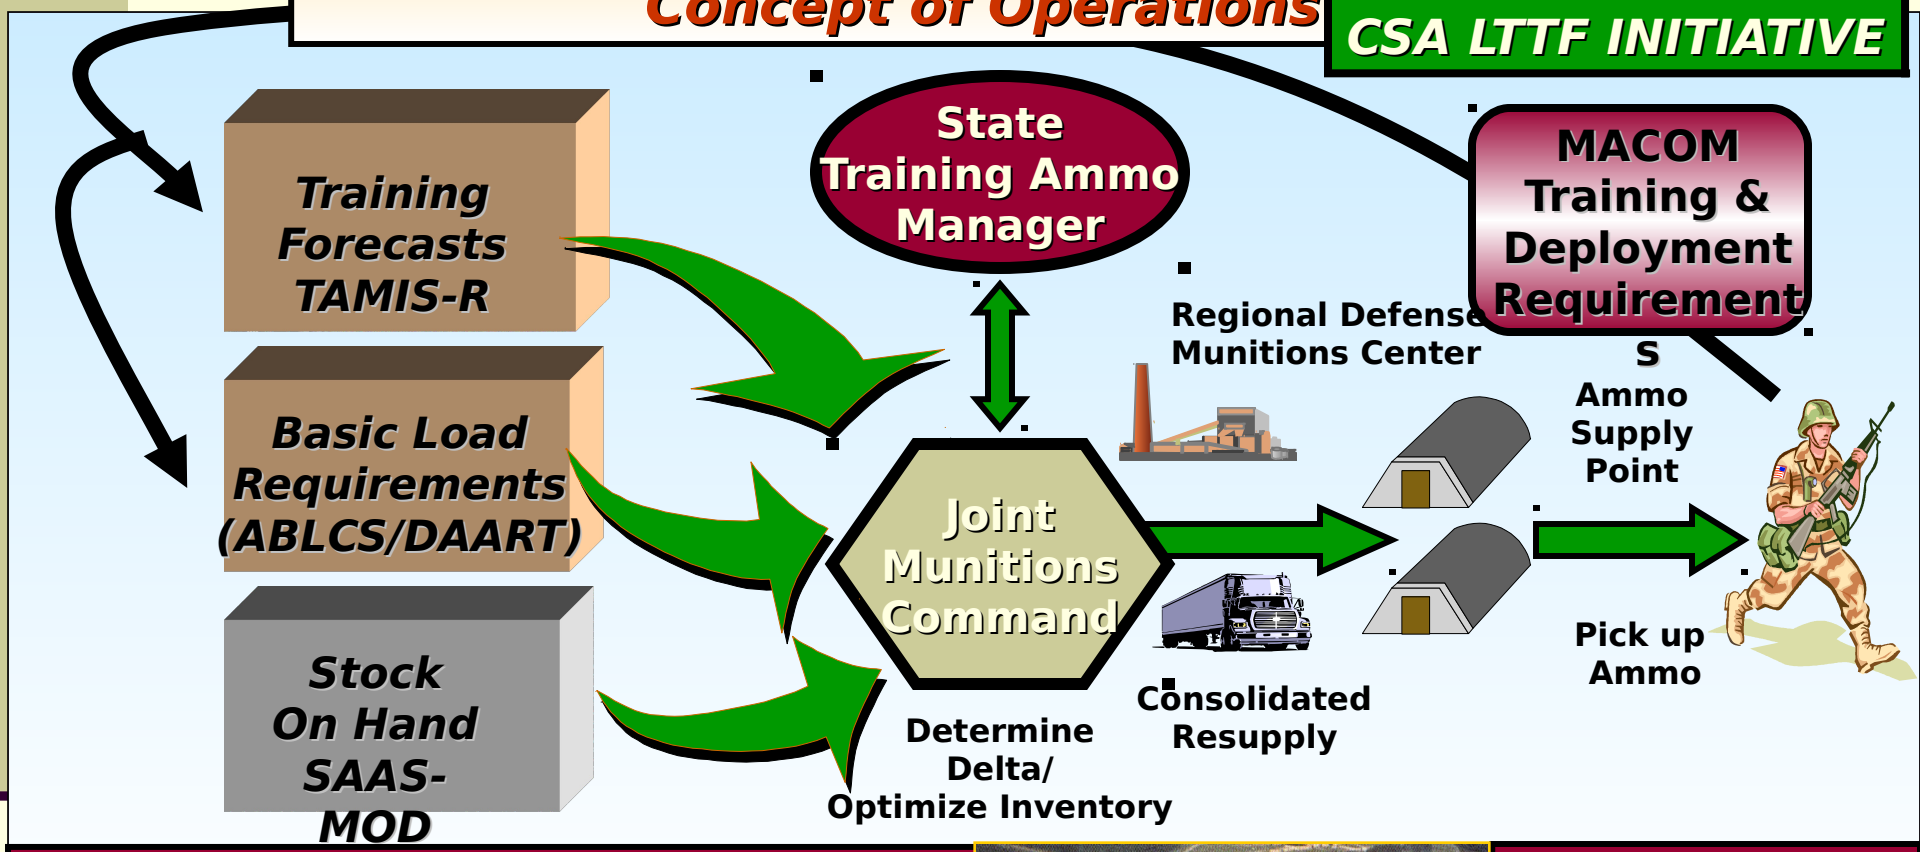
Procedures Prior to CAM

- ASP inventory based on historical usage data
- Mass-based Logistics Concept-Stock Pile
- USPFO Stock Control managed inventory levels. Visibility through DA Form 581
- Utilized AEPS requisition procedures

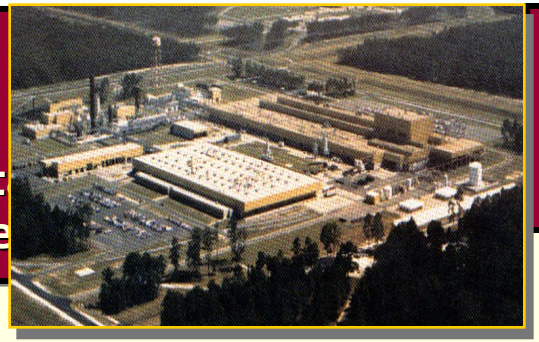
Centralized Ammunition Management

Concept of Operations

CSA LTTF INITIATIVE



- **Enhance** strategic mobility/deployability
- **Reduce** sustainment footprint
- **Reduce** cost of logistics while maintaining warfighting capability and readiness



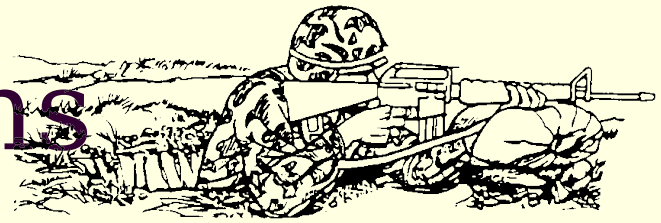
Long Term

Readiness ↑ Cost ↓

Procedures under CAM

- Ammunition needs are visible through TAMIS-R.
- Requirements are based on Calculator
- JMC sends ASP monthly CAM Study
- ASP reviews CAM Study, makes adjustments
- ASP receives 90 day inventory Push based on forecasted requirements
- ASP required to ship excess ammunition worldwide.

CAM Calculations



- **Calculator**
  - Utilizing data, shortage calculated using following formula:
    - **Due-ins + Assets – 90-day forecast = Plus or Minus (shortage)**
    - **Determines the CAM PUSH**
    - **ASP Reviews CAM Study monthly makes adjustments for NEW Storage, RDD, CAT I, CAT II to Tooele.**
  - Calculator sorts by CALS and Non-CALS
    - Applies data from Overhead Fire Table
    - Generates RDD (6 weeks from 1st working day of month)

How does CAM affect training?

- CAM push is determined through TAMIS-R forecasts.
- Inventory based on projected requirements.
- CAM directs excess to where there is a requirement.
- Reduces flexibility for Ammunition based training.
- Training and Operational Load ammunition must be forecasted.

Training vs. Operational Ammo

- **TRAINING**
- Forecast in TAMIS-R
- Submit TAR
- **TEC = TRS**
- *** 90 DAY FORECAST WINDOW**

- **TRAINING**
- No Forecast in TAMIS-R
- Memo to NGB
- Submit TAR
- Ordered in the CAM Study

- **OPERATIONAL LOAD**

Ammo likely to be Expended

- **TEC = OPL**
- Memo to NGB
- Submit a TAR
- Ordered in the CAM Study

Ammo not likely to Expend

- **TEC = OPN**
- Memo to NGB
- Submit a TAR
- Ordered in the CAM Study

- **OP Load AMMO must be CC A**
- **OP Load Ammo in PBIC #8- Property Book**

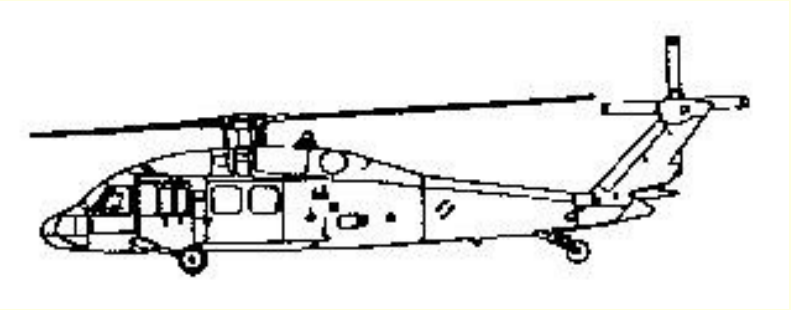
AVIATION AMMUNITION

- **CADS/PADS**
- **TEC = OPL**
- Submit a TAR
- Stock Control will request in AEPS (AOE)

L119-ALSE

- **TEC = OPN**
- Submit a TAR
- Ordered in the CAM Study

CADS/PADS, installed or uninstalled, must be accounted for on the property book in PBIC #8.



CADS/PADS

- **Request CADS/PADS**
  - DA Form 581 (TAR)
  - Include Tail # in remarks column
  - 1-1 Exchange at ASP
- **Turn in CADS/PADS**
  - CADS/PADS Submission Spreadsheet
  - DA Form 581 T/I
  - T/I in CC K
  - Appointment with ASP
  - ASP request disposition from Rock Island.

CADS/PADS SUBMISSION

TAIL #	ARCFT MODEL #	NSN	DODIC	NOMENCLATURE	LOT #	QTY	INST DT	RMV DT

Effective Ammo Draws

- Forecast in TAMIS-R IAW UTARNG 350-1.
- Submit TAR IAW UTARNG 350-1.
- Review ASP SOP for Coordination times with Stock Control and ASP.
- Request for realistic training requirements.
- TIPS:
  - DA Form 1687 Current
  - Haz-Mat Certification on Mil Drivers License-348
  - DD 626
  - Convoy Clearance
  - Vehicle requirements.
  - TAMIS-R Pick up times-Call ASP
  - Refer to AGCW web site for Ammunition tools.

.

Effective Ammo Turn-in

- Turn-in required five (5) days from the Training Event.
- DA Form 581’s must be completed prior to the Turn-in.
- Units required to provide enough personnel to accomplish the turn-in task.
- Turn in tasks include:
  - Unloading
  - Segregating by DODIC and lot number
  - Inspecting
  - Repacking
  - Re-stenciling Containers
  - Place in bunkers
  - Both Live and Residue

CAT I Ammunitio

- Requires unit pick up at TEAD.
- Must have an armed escort.
- Store in FASP in approved containers.
- Requires two man rule for access.
- 24 hour armed guard surveillance.
- Category I
  - “Non-nuclear man portable missiles and rockets “in a ready to fire” configuration”
  - AT4, Stinger, Dragon, LAW, Viper, etc.
